

# Release Note

Product	UI-2PV
FW version	V0.91
Release Date	2025-05-14

1. Files Released

File name	SHA256	Remark
ui-2pv.v091.bin	a35f5f4aecc06938003892a4df7f5ce953a766d0ecfba08369e0dba089c904cd	

2. Login Password.

**\* Connectable HOST IP : 192.168.123.200**

Access from	User name	Password	Notes
Web (http only)	root	-	Default MAC(WAN): 00:0C:43:47:D3:27 Default MAC(LAN): 00:0C:43:47:D3:28  Default SN : UI250599999
SSH	root	-	Default IP address(WAN) : 192.168.123.1 Default IP address(LAN) : 192.168.1.1

\* Console Info.

ttyS0 : 57600, 8N1

No password

### 3. Firmware factory mode Default Configuration

Default IP to login :

192.168.123.1

version : 0.9.1

SSH : enable

Default SN : UI250599999

Default MAC : LAN : 00:0C:43:47:D3:28      WAN: 00:0C:43:47:D3:27

### 4. MAC SERIAL INITIALIZATION.

[http://192.168.123.1/cgi-bin/change\\_mac?interface=wan&mac=00:0c:43:47:d3:27](http://192.168.123.1/cgi-bin/change_mac?interface=wan&mac=00:0c:43:47:d3:27)

[http://192.168.123.1/cgi-bin/change\\_serial?serial=UI250599999](http://192.168.123.1/cgi-bin/change_serial?serial=UI250599999)

You can get the default SN&MAC information through the command. MAC: 00:0C:43:47:D3:27  
SN : UI250599999

### 5. MFG command.

items	command	Remark

## Status

### System

Hostname	UI-2PV
Model	UI-2PV
Architecture	MediaTek MT7628AN ver:1 eco:2
Serial Number	UI250599999
Firmware Version	V0.9.1
Kernel Version	6.6.73
Local Time	2025-05-15 05:07:15
Uptime	0h 2m 11s
Load Average	1.89, 0.78, 0.29
MAC Address	00:0C:43:47:D3:27

<http://192.168.123.1/cgi-bin/luci/admin/status/overview>

#### 6. MAC & SN Writing.

[http://192.168.123.1/cgi-bin/change\\_mac?interface=wan&mac=00:0c:43:47:d3:27](http://192.168.123.1/cgi-bin/change_mac?interface=wan&mac=00:0c:43:47:d3:27)

Display web page

MAC address has been successfully changed: 00:0c:43:47:d3:27 (eth0.2), 00:0c:43:47:d3:28 (eth0.1)

#### 7. MAC Rule [last digit of LAN MAC should be odd number\_”1”, “3”, “5”, “7”, “9”, “B”, ”D”, ”F”]

WAN MAC : 00:0c:43:47:d3:27

LAN MAC : 00:0c:43:47:d3:28 (BASE\_MAC+1) writing MAC.

#### 8. AP WEB UI access.

I.P : <http://192.168.123.1>

P.W : No password

## 9. Button

[http://192.168.123.1/cgi-bin/test\\_button?mode=on](http://192.168.123.1/cgi-bin/test_button?mode=on)

Display web page

Button test mode has been enabled.

Press the reset button to test.

Available events: pressed, timeout, released

Test types:

normal: Default behavior

1sec: Simulate 1 second press

5sec: Simulate 5 second press

Push button click

Display console

[TEST MODE] Button pressed event

REBOOT

[TEST MODE] Button released event

[TEST MODE] Button pressed for less than 1 second

Push button long time press(over 5 seconds)

[TEST MODE] Button pressed event

[TEST MODE] Button pressed more 5secs

FACTORY RESET

[TEST MODE] Button released event

[TEST MODE] Button pressed for 5 or more seconds

## 10. Watchdog

[http://192.168.123.1/cgi-bin/test\\_wdt?mode=start](http://192.168.123.1/cgi-bin/test_wdt?mode=start)

Display web

Watchdog status: {

"status": "offline",

"timeout": 30,

"frequency": 5,

"magicclose": true

}

Watchdog started successfully

Watchdog is now running.

The system will reboot after 30 seconds.

Display console ( over 30 seconds)

root@UI-2PV:~# [ 259.656810] watchdog: watchdog0: watchdog did not stop!

...

30 seconds
